Provincial Highways

Traffic Volumes

1988-2019, 2021

King's Highways / Secondary Highways / Tertiary Roads

Ministry Contact:

Provincial Traffic Office (905)-704-2960

Abstract:

This annual publication contains averaged traffic volume information and collision rate information for each of the sections of highway under MTO jurisdiction.

Key Words:

Annual Average Daily Traffic volume (AADT), Summer Average Daily Traffic volume (SADT), Summer Average Weekday Traffic volume (SAWDT), Winter Average Daily Traffic volume (WADT), Collision Rate (CR)

PREFACE

Traffic volume information is used by many people to assist them in assessing the viability of business proposals, land use options, marketing, advertising, and a host of other activities. This publication, **Provincial Highways Traffic Volumes 1988-2019, 2021**, provides traffic volumes on an annual and seasonal average basis for selected links in the provincial highway network. The traffic pattern type and accident rates on the selected links are also indicated.

The Ministry will not be publishing 2020 traffic volumes. The COVID-19 pandemic significantly altered traffic patterns and behaviours, and as a result 2020 is considered an outlier year.

Although 2020 traffic volumes will not be published, the Ministry did collect traffic data throughout the entirety of 2020. This data remains available for use and, provides valuable insights into traffic trends and patterns during an outlier year.

This information is available upon request, please contact MTO INFO at 1-800-268-4686 for the appropriate regional phone number or Email: mtinfo@ontario.ca.

The Highway 407 ETR is maintained by 407 ETR Concession Company Ltd. and is not included in this publication. For information contact the 407 ETR Traffic Department at (905) 265-4070.

Some highway routes which have not yet been assigned an official highway number, are included under the title Selected 7000 Series Highways.

The statistics contained herein have been prepared based on data (both electronic and otherwise) obtained from sources considered to be reliable. The Ministry makes no representation or warranty, expressed or implied with respect to its accuracy or completeness.

This publication also supersedes any previously published publications.

TRAFFIC VOLUME INFORMATION

The King's Highways	- Queen Elizabeth Way (QEW)	1
	- Highway 2 to Highway 148	46
	- The 400 series (Highways 400 to Highway 427)	853
The Secondary Highways	- Highway 502 to Highway 673	1135
The Tertiary Roads	- Highway 802 to Highway 811	1352
Selected 7000 Series Highways	- Highway 7025 to Highway 7910	1357

INTRODUCTION

This publication contains information pertaining to traffic volumes on roads under Provincial jurisdiction as of December 31, 2021. The publication is divided into two parts.

OVERALL SYSTEM SUMMARIES

The information in this section is included for policy analysis and program planning purposes. It includes summaries about the overall Provincial Highways system. The system indicators are developed from travel experience, accident data and highway geometrics.

TRAFFIC VOLUME INFORMATION

A detailed listing outlining the 33 year history (1988-2019, 2021) of traffic volumes on Provincial Highways (King's, Secondary, Tertiary Roads and the 7000 series highways) is provided.

The highway network is divided into approximately 1865 sections for reporting purposes. Seasonal traffic volume variations are estimated for each section reported. Although local conditions cause variations in the volume within the sections, the volumes shown are considered to adequately represent the section.

On highways that overlap another highway, for instance Highway 35 and Highway 115, the volume information is referenced to the lower number highway. When an overlap occurs between a freeway and non-freeway, reference is made to the freeway number. The freeways are Highway 400 to Highway 427 and the QEW.

The following are definitions to reading the listings:

Location Description: A statement identifying the start or ending point of a section. Some frequently used abbreviations include:

BDY	boundary
BR	bridge
C	concession
C/L	connecting link
CTY	county
DIST	district
KM	kilometres
AVE	avenue
REG	regional
HWY	highway
IC	interchange
JCT	junction
L	lot
LN	line
LTS	limits
NA	non assumed*
OH	overhead
OP	overpass
PKWY	parkway
R	river
RD	road
ST	street
TWP	township
UP	underpass

*Non Assumed – indicates that the roadway is not under provincial jurisdiction therefore contact the corresponding regional municipality for traffic volume information.

Distance (KM)

The length of the section in kilometres reported to one decimal place.

Pattern Type

One of 14 pattern types that represent the seasonal variation of the traffic flow on the section indicated. A graphical presentation of these pattern types has been included on the following page.

The 14 pattern types represent the traffic flow variation on the whole network. They include:

Variation Types

LOW	UC	urban commuter
	SC	suburban commuter
	C	commuter
INTER	IC	intermediate commuter
	CR	commuter recreation
	IR	intermediate recreation
	CTR	commuter tourist recreation
	IT	intermediate tourist
HIGH	LT	low tourist
	T	tourist
	HT	high tourist
	LR	low recreation
	R	recreation
	HR	high recreation
	UNKN	unknown
	UNCL	unclassified
	NEW	new volume section

The first three are generally referred to as Low Variation Curves (or commuter travel); the next five as Intermediate Variation Curves

(a blend of all types of traffic); and the last six as High Variation Curves. For the last group, the first three represent tourist travel and the second three, recreational travel; this sub-grouping is distinguished by the relationship of weekend to weekday traffic.

There are two additional codes in the pattern type column. "UNC" indicates that the AADT was calculated using adjustment factors from an unclassified (i.e. new) permanent counting station. "NEW" indicates that this is a new volume section and there is insufficient data to assign a pattern type.

AADT

Annual Average Daily Traffic; defined as the average twenty four hour, two way traffic for the period January 1st to December 31st.

SADT

Summer Average Daily Traffic; defined as the average twenty four hour, two way traffic for the period July 1st to August 31st including weekends.

SAWDT

Summer Average Weekday Traffic; defined as the average twenty four hour, two way traffic for the period July 1st to August 31st, excluding weekends.

WADT

Winter Average Daily Traffic; defined as the average twenty four hour, two way traffic for the period January 1st to March 31st, plus December 1st to December 31st, including weekends.

NOTES:

- (a) The user of this publication should realize that the reported data are 'estimated values'. Since traffic volumes are not static, direct field measurements are accurate only for the time of the count. Also, the size of the Provincial Highway network makes it impractical to measure each section annually. Thus, approximately one third of the reported sections are counted each year. The following three methods of measuring traffic volumes are employed:

1. Permanent Data Counting Stations: At designated locations across the Province counts are taken for each hour of the year.
2. Inventory Counting Stations: Each unique volume section has a set location where traffic volumes are sampled on a cyclical basis by season and year.
3. Request Counting Stations: Traffic volumes are measured at random locations as needed to address operational or planning concerns.

Using the available traffic volume information and historical trends, estimates are made for each highway section.

- (b) The abbreviation "N/A" (Not Available) refers to a new volume section or where no data is available. Data for these sections should be available in future publication once collected.
- (c) There may be some missing or incorrect traffic sections, and distances, due to highway realignment, highway transfers, renumbering, or sections which have been recently built.

CR

Collision Rate is defined as the number of reportable collisions occurring annually on a particular highway section for every million vehicle kilometres (MVKM) travelled on that section during the same period. "Reportable Collisions" are those causing any death, injury or property damage exceeding a certain established amount.

The collision rate is calculated as follows:

CR = the number of collisions for a given year divided by the MVKM, noting the following:

$$\text{The MVKM is calculated as follows:} \\ = \frac{\text{AADT} \times \# \text{ of Days in year} \times \text{Section Length (DIST-km)}}{1,000,000}$$

Notes:

- (a) Multiple vehicle collisions (i.e., chain reactions are generally considered as one collision unless the reporting police officer decides otherwise).
- (b) Collisions on freeway ramps are totally excluded from sectional and total system accident rate calculations. After 1996, highway ramps have also been excluded.
- (c) If no collisions have occurred on a given section, the collision rate is shown as zero.

TRAFFIC VOLUME INFORMATION

The King's Highways	- Queen Elizabeth Way (Q.E.W.)
	- Highway 2 to Highway 148
	- The 400 series
	(Highway 400 to Highway 427)
The Secondary Highways	- Highway 502 to Highway 673
The Tertiary Roads	- Highway 802 to Highway 811
Selected 7000 Series Highways	- Highway 7025 to Highway 7910

NOTE:

Highway 407 ETR is maintained by 407 ETR Concession Company Ltd. For information contact the 407 ETR Traffic Department at (905) 265-4070.

Note 1) Provincial Highways includes Tertiary roads.

2) MV.km is million vehicle kilometres of travel.

3) MV.km for Provincial Highways (and components) is based on estimated traffic volumes and reported section lengths.

4) *Municipal Roads is derived from the difference of Ontario and Provincial Highways and represents all the non-provincial roads/highways in the Province. SOURCE: Ontario Road Safety Annual Report.

5) *Ontario MV.km figure for 2000 onwards is significantly higher due to the change in methodology developed by Statistics Canada. This is a more accurate methodology as compared to the previous method of using fuel tax. (Vehicles today are more fuel efficient and may lead to a higher mileage. Therefore, Provincial MVKM figures may be significantly higher, which can further lead to higher values for Other Roads. SOURCE: Ontario Road Safety Annual Report (Synopsis).**

6) Highway 407 is included in the "Other Roads" category only. For all other information regarding Highway 407, contact the 407 ETR Traffic Department at (905) 265-4070. higher, which can further lead to higher values for Muunicipal Roads. SOURCE: Ontario Road Safety Annual Report (Synopsis).
